1 Element Review

1.1 Block-Level Elements

- Renders content on a new line
- Renders content left-justified
- Renders content to expand the entire width of the document
- Meant to structure the main parts of your page by dividing up content

1.2 Inline-Level Elements

TBC

1.3 HTML Headings

HTML has a "0 to many" hierarchy for headings. **h1** is a main heading, everything else is a sub-heading. The rule for headings to is always go in order. If you need to change the sizes of headings, change it with CSS.

1.4 Paragrpah

`<p>` Block level element

1.5 Horizontal Rule Element

`<hr>`

1.6 Line Break Element

`<br>`

1.7 Head, Header, and Headings

The head element is where the metadata is stored in a page. Header is the top of document, more for organizing a document. A heading indicates the hierarchy of a page.

1.8 Preformatted text element

`<pre>` tells the DOM to render any space or line breaks. Without it, the DOM will ignore whitespace

1.9 Lists

Unordered List A list with bullet points:

```
<ul>
  <li>List item</li>
</ul>
```

Ordered List A list with numbers points

```
<ol>
  <li>List item</li>
</ol>
```
