

Project 2 | Part 1

Student Information:

- Name: John Zimmerman
- Section: Mo/We
- Email: jzimmerman3@madisoncollege.edu

Planning List

Input Variables

- principal
- annualInterestPercentage

Output Variables

- principal
- annualInterestPercentage
- interestEarned
- principalWithAnnualEarnings

Process Checklist

1. Declare all variables
2. Obtain investment amount and interest rate
3. Convert investment amount and interest rate to numeric format
4. Convert interest rate to decimal form
5. Calculate interest earned in one year
6. Calculate new principal amount now with annual earnings
7. Display initial principal, interest rate, earned interest, and new principal

Your Output

Results of your Investment Scenario are shown below

If you invested \$300.33 at an annual rate of 5.7%, then you would earn \$17.11881 in one year. You would then have a total of \$317.44881 at the end of the year!
